

nylex

The revolutionary Nylex garden hose range features the innovative VISIGRIP technology that is not only visually appealing but will improve your whole watering experience.

Feeling soft to the touch the hose is pleasant to hold and won't slither out of your hands. Furthermore, the textured grip has anti-slip features that assist with rolling and unrolling your hose.

Choosing the right Nylex hose for the job

The kink resistance rating highlights how resistant the hose is against kinks

Nylex hoses are fitted with heavy-duty 'Anti-Leak' connectors designed to suit all garden taps.

Nylex hoses are UV treated providing protection against damage caused by the Australasian sun.

Nylex connectors contain a Thermo Plastic Rubber finish providing extra grip in wet conditions.

When used with hose storage products, the Nylex hoses have been designed to be easy to roll and unroll.

For enhanced durability and superior resistance against kinks and twists choose the Nylex hoses with patented anti-kink knitted technology.

The thicker the wall width, the more durable the hose will be and will withstand higher water pressures.

A higher warranty ensures higher quality and performance.

With more than two times the burst pressure resistance than traditional garden hoses choose Nylex Never Kink Pro.
